talents through proper, systematic training. The expected outcome is remarkable achievements in the university level youth festivals and athletic meets.

### **HBC GREEN CAMPUS DRIVE**

To foster a culture of self-sustainability and make the entire campus an eco friendly living laboratory, the HBC community initiated green campus drive. At the outset, we could understand that our students are interested in digging their fingers into a patch of soil on HBC campus as most of them come from farmers' families. Interestingly, we can see in the preceding years of our students' campus life that there are students who want to be around vegetable plants and not spend their college period worrying about pre-educational stuff. Nowadays, our students are more interested in both campus vegetable gardens and herbal gardens (cultivating medicinal plants) because it is something within their control. There are students who lack nutritional value; in this context, we decided to distribute the agricultural produce to a selected number of our financially backward students, hence we can say that HBC's vegetable garden tries to get around this nutritional barrier. We have different varieties of vegetable herbs, beans, tomatoes, etc. and our campus garden activities of our students inculcate in them a habit of sustainability, nutritional thought, and ultimately self-sufficiency by the time when they are back at home. We use the natural manure from the Compost Pit for the vegetation and cultivation of this garden.

The other major initiatives of this green campus drive inter alia include: waste disposal system by placing tricolor bins in different places on the campus, internal generation of electricity through solar panels, tree plantation drive (HBC Cloud) and a Plastic Waste Crushing Unit inside the campus. We expect a 25% additional growth every year in all the aforesaid areas.

### **HIGHER EDUCATION**
